

RED RIVER ARMY DEPOT ENVIRONMENTAL POLICY

Red River Army Depot's environmental policy is an integral part of our mission, and is the core of the Depot's Environmental Management System. This policy states in broad terms the environmental commitments of Red River Army Depot now and into the future. Red River Army Depot strives to be one of the national leaders in environmental, energy and natural resource stewardship. Red River's primary focus areas are prevention, compliance, restoration and conservation. The Chief, Environmental Division is responsible for Red River Army Depot's Environmental Management System. However, environmental stewardship is the responsibility of every member of the work force, as well as its strategic partners and residents. Depot personnel consider many environmental aspects when assessing current and up coming projects. Personnel consider environmental impacts of operations and activities through setting objectives and targets relevant to environmental aspects, planning, monitoring and revisions to achieve continuous improvement of our Environmental Management System. Red River Army Depot implements and will continue to implement new and innovative ways to prevent pollution, minimize waste, manage natural resources and to conserve energy. Red River Army Depot's personnel ensure that all activities comply with relevant environmental legislation, regulations and policies. We will continue to maintain a positive relationship with the local community, regulators and other governmental agencies.
